Literature review

This slide might contain a brief list of facts we summarize from literature.

- I just wrote a sentence. I want to be careful writing long sentences.
- Instead of a bibliography, we might use footnotes[1].

---

[1]This is a footnote. This also works in article.

What is it?

All of our text formatting commands still work.

We can use colored text.

We can use special fonts like *italics*.

Presentations come with one new trick, called alert.

Formatting with minipage

- hey
- look
- an image

Note: We aren't going to use the figure environment, a formal caption, or a label (most likely).

Don't forget about math

We can include math as well,

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a},$$

which solves $ax^2 + bx + c = 0$ for x.

Warnings

- Too much text is often hard to read.
- Tables aren't often as useful in slides as on paper. If you do, avoid too many vertical separator bars.
- If references are relevant, list them.
- Lots of people include QR codes (or short-links).
